

SUBMISSION INTO REVIEW OF FiT

August 3rd 2018

I feel with the looming challenge of climate change it is up to everyone to do a bit towards moving away from fossil fuels.

I installed solar panels on my home about 6 years ago and they have reduced my electricity bill as I have received 28.283c per kwh.for my power produced.

However I do not think that the current Regulated FiT of 8.541c per kwh is a reasonable amount. It would discourage many people from future installations.

I think a fairer amount would be around 16c per kwh. This would still give Aurora a profit of 9.9c kwh on Tariff 31 and a small profit on Tariff 41,

Yours faithfully
