Submission from Robin Nisbet .  
PO box 179 St. Helens . 7216 .

AS a residential solar power producer connected to the grid , I pay all the usual charges and daily rates . The excess solar power I produce can be on sold by AURORA for a large profit , even after paying me the residential retail rate . The suggestion that the price I will be paid is going to be reduced to the wholesale price , or thereabouts is nothing more than stealing , gouging or something worse .

Right at this moment the 4 big banks are being crucified , and fined , for “ unconscionable “ behavior . Or unethical practice . Exactly what the Government and AURORA are proposing to do re Solar feedin tariff .

I have no other buyer available , for a clean , highly saleable product , and AURORA expects to take it from me for next to nothing . Disgraceful .
