

4th May 2020

Supply of M2 Logistics Ethanol 80% Hand Sanitiser

Pricing and Supply Quantities

Our local retailer and wholesale distributor, The Importer, is able to offer extremely competitive pricing **per 500mL pump pack**. This price includes freight and is based on a delivery. We can supply in a variety of quantity options. Containers would contain pallets of our product which is packaged in cartons of 12 x bottles/carton. Each pallet holds 106 cartons of Hand Sanitiser. If necessary we can also supply in single pallet quantities. Transport to other sites is possible, but we have not obtained freight pricing to other capital cities at this stage. For larger quantities (greater than 1 pallet) please contact us directly to arrange pricing.

Online sales are available at [this link](#).

Company Background

M2 Logistics is a company established in Launceston, Tasmania by two pharmacists (Martin Quinn and Matthew Will) to assist organisations during the current COVID-19 crisis. We both have widespread experience in retail pharmacy as well as wholesale manufacture and supply of medicines and medical products all over Australia. Prior to selling our retail pharmacies in 2017 we also managed the supply and distribution for a large pharmacy group in Tasmania.

M2 Logistics has provided large quantities of our 500mL pump pack bottles to the Tasmanian Health Service for utilisation in the State's public hospitals.

Manufacture

Our hand sanitiser product is produced at Tasmanian Alkaloids, a registered Therapeutic Goods Administration (TGA) manufacturing facility, making it fully compliant with the TGA's Therapeutic Goods Amendment (Excluded Goods - Hand Sanitisers) Determination 2020. Our Hand Sanitiser is made in strict accordance with the World Health Organisation's recommended hand rub formulation, using pharmaceutical grade products. This enables us to produce a product containing 80% Ethanol - most others on the market are unable to make this claim. As you will be aware a concentration of at least 70% is required to destroy viruses.

Included are images of the current final product. We have recently obtained registered EANs, which will result in future commercial and retail batches having a barcode.

Our product

We believe that our product has several advantages to others already in the market;

- Manufactured in a TGA facility with pharmaceutical grade products
- 80% Ethanol (supported by official analysis reports performed with each batch)
- Locally made in Tasmania
- Pump pack presentation for ease of use
- Refill packs available
- Customisable labelling options
- Ability to produce up to 40,000 units (500mL bottles) per week
