Subject: solar feed in rate

Good afternoon,

I wish to add my voice to the rate feed in rebate, I feel a fair rate would be around 16c.

With over 25,000 people with panels who add to the grid already and Hydro don't have to add more resources for power, this would be a fair rate.

If the rate was set at 16c, more households would consider installing but they need a certain rate and it needs to be fair.

If I add my solar into the grid and only get 6c, then its not Fair, as I buy for 22c or higher.

Common sense has to rule and a fair price be paid.
