Subject: HPRM: Submission re feed-in for renewables

FAIR IS FAIR,

Private investments in renewables should be rewarded for abating CO2 emission from power generation. Every KWh from the sun or wind will keep it's equivalent of water in our Hydro dams and in turn feed only the cleanest energy into the national grid or keep the water a bit longer and / or for the droughtproofing of the state. May I remind you of the empty dams and a fried bass link a few years back.

Same price for feed in and out will ensure that we all will do our best to keep the cost of electricity as low as possible. Any less for feed in price will require a convincing explanation.

Please confirm you received my submission and keep me informed about the decisionmaking.
