Jon Foulston

submit this submission in support of **NOT** reducing our solar feed in tariff from 28.238c kWh to 8c kWh.

1. In 2013 we installed Solar Panels on our dwelling for ourselves and our two growing children to help with rising costs of power prices.
2. This rebate has helped enormously with skyrocketing power prices and reduced our power bills to a manageable level.
3. If this reduction becomes legislated, we feel that we have been significantly disadvantaged regarding this investment.
4. We chose to make this investment due to the enormous amount of advertising re. Solar panel installation and rebate incentives at the time.
5. If this reduction does happen, we feel that our investment in Solar Energy will have been a waste of our hard earned money.
6. Please consider maintaining the current feed in tariff.
7. Due to the cost of installing solar batteries, this would now not be an option for us.
