To Whom It May Concern,

In 2013 we invested \$9,200 in a 5 kw solar system. At the rate of the feed in tariff of 28.2 cents it will take 7 and  $\frac{1}{4}$  years to recoup the initial amount invested.

I was looking into another 5 kw system and allowing for the cheaper systems now available it is not viable at the rate of 8.9 cents kwh as that would take 20 years to recoup the money spent

To encourage future investment in Solar Power it needs to be a reasonable rate of at least 25 cents kwh

Regards
