I like many people have put systems in place in the belief of getting a fair deal for there investment the power put into the system is at no real cost to tasnet works I'm the one who paid for it and if it's faulty I pay to fix it. So I'm now getting 28 cents per KWH this will drop I think to 8 cents ,Why would any body in there right mind now go to the expense of a solar system with very little return It's not easy to use all the power made during the day If more people were and given good reasons to install solar think of all the renewable energy that would be available and at no infrastructure cost to tasnet works.Plus this would also be a benefit to those in the solar industry

Thank You Trevor Moore
