

Evening people ,

Please Think very carefully before setting population targets . Many areas are already struggling to support current population numbers with a serious lack of planning and infrastructure .

It seems growth at any cost is the only language spoken with little regard for existing natural values and no regard for tasmanians needing help.

The big end of town wants stadiums bass links and chairlifts and will find funding but 1000 social houses or a reduced health waiting list both of which have better outcomes are only talked about ...only tokenism .

Tasmania spends a billion dollars a years on importing fuel and then buys electricity from fossil fueled Victoria , forget about big noting battery of the nation and convert to EV's , use our own renewables put the savings back into public health and housing and show some leadership not just distraction politics and empty rhetoric .

Bigger populations only demands greater infrastructure, don't make things worse.

Regards Mark Lawrence
